Education Background

Stanford University <i>Ph.D. Student in Physics</i>	California, U.S. 2024-Present
Shanghai Jiao Tong University <i>Bachelor of Science in Physics, School of Physics and Astronomy</i>	Shanghai, China 2020-2024
• Overall GPA: 86.1/100 (A-); Physics-related GPA: 90.1/100 (A) • Coursework: <i>Quantum Mechanics, Electrodynamics, Equations of Mathematical Physics, Professional Experiment, Introduction to Nuclear and Particle Physics, Methods of Experimental Nuclear and Particle Physics</i> (All graded A's)	
University of Maryland, College Park <i>Visiting International Student</i>	Maryland, U.S. Aug. 2023-Dec. 2023

Research Experience

SLAC National Accelerator Laboratory <i>Particle Physics and Astrophysics</i> <i>Research Assistant</i> (Supervisor: Dr. Julia Gonski & Prof. Dong Su) – Research on the ATLAS • On-chip machine learning for waveform analysis and data compression in dual readout calorimeters. • GigaBit Cable Receiver (GBCR) ASIC Testing.	California, U.S. Jan. 2025-Present
SLAC National Accelerator Laboratory <i>Particle Physics and Astrophysics</i> <i>Research Assistant</i> (Supervisor: Prof. Spencer Gessner) – Research on the FACET-II • Compton cross sections calculation for laser-based control of beam intensity. • Update to the TCAV GUI and analysis tools.	California, U.S. Sep. 2024-Dec. 2024
University of Maryland, College Park <i>Department of Physics</i> <i>Undergraduate Research Student</i> (Supervisor: Prof. Christopher Palmer & Prof. Sarah Eno) – Research on the Dual-readout Calorimetry • Performed Geant4 simulations of single-particle responses for diverse calorimeters. • Derived a formula that predicts the dual-readout-corrected energy from scintillator and Cherenkov signals alone.	Maryland, U.S. Aug. 2023-Aug. 2024
Shanghai Jiao Tong University <i>School of Physics and Astronomy</i> <i>Undergraduate Research Assistant</i> (Supervisor: Prof. Yue Meng) – R&D for a novel radon detector • Designed the Radic detector and determined the radon diffusion coefficient of several materials successfully.	Shanghai, China Oct. 2021-Feb. 2024

PandaX Collaboration

Shanghai & Sichuan, China

Undergraduate Research Student

Oct. 2021-Feb. 2023

– Work in Ultra-low background technique R&D group

- Measured radon emanation rates across diverse materials for the PandaX and JUNO experiments.
- Conducted ultra-low radioactive surface treatments of materials for TPC assembly in PandaX-4T.

– Work in PMT group

- Performed PMT high-voltage testing to ensure standard operating currents and assessed parameters.
- Participated in the installation of veto PMTs and high-voltage cables for TPC-bottom PMTs.

Tsung-Dao Lee Institute

Shanghai, China

Astronomy and Astrophysics Division

Mar. 2023-Aug. 2023

Undergraduate Research Student (Supervisor: **Prof. Masahiro Ogihara**)

– Research on the stability of unevenly spaced planetary systems

- Conducted N -body simulations to study the planetary system stability.
- Demonstrated that using evenly spaced models can overestimate orbital stability time in natural systems.

Skills

Technical: C++, Python, CERN ROOT, Geant4, SolidWorks, COMSOL, LaTeX

Hardware: Ultra-low radioactive technology, High-voltage technology, PCB debugging, PMT testing

Language: English (Fluent), Mandarin (Native)
